

Press Kit BAU 2017

heroal zero-barrier standard threshold

January 2017 - Versatile heroal object and house doors - in combination with the heroal DS drainage system also with a zero-barrier threshold.

Enhanced design at the highest level

Entrance areas with wing-covering panels and concealed hinges are a popular trend both in private residential and commercial construction. At the BAU, heroal is exhibiting up to 3 m high interior and exterior doors of the heroal D 72 system that meet these requirements. These doors can be controlled with an app or manually with the new heroal design stainless steel handle for house and object doors. In other models, the design handle can also be used for panic and fire protection doors. The issue of security in the area of fitting is addressed with an integrated RC rosette designed by heroal, which is distinguished by a modern, unobtrusive design as a tested intrusion-resistant component.

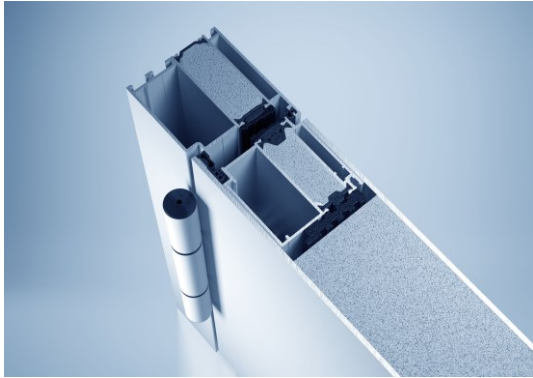

New sealing strip for optimal assembly

While continuously working on reducing the number of required components, the engineers at heroal have further optimised and achieved an advantage with the help of a new sealing strip: the new door connection is time-saving and cost-efficient in terms of production and assembly.

heroal zero-barrier threshold

heroal zero-barrier threshold in combination with the heroal DS drainage system achieves the impact resistance of class 8A. Thanks to balanced optics and tested zero-barrier threshold, rain is not only guaranteed to remain in front of the door, but it can also be controlled.

Water is not only guaranteed to remain in front of the door, but it can also be controlled.

heroal – the aluminium systems supplier

As a leading supplier of aluminium systems, heroal develops and produces perfectly coordinated systems for windows, doors, facades, roller shutters, roller doors and sun protection. Folding and sliding shutters, insect protection, terrace roofs and carports round off the product range. By minimising energy consumption during production, maximising energy conservation during usage as well as ensuring optimum profitability during system manufacturing and an increase in the value of the building, heroal system solutions make a significant contribution to sustainable construction.

Innovation, service, design, sustainability

The heroal brand represents system solutions that unite practical innovations, industry-leading service and high-quality design that can be sustainably integrated into any architecture.

Over 800 employees across the company work continually to further develop the systems and optimise the quality of heroal's service and performance.

The heroal brand stands for premium quality made in Germany – certified according to ISO EN 9001. heroal products and systems are produced and assembled exclusively at heroal's German production sites – at its headquarters in Verl and also in Hövelhof.
